

Don't use "pt" font sizes

Imported From: http://groups.google.com/group/in-portal-org/browse_thread/thread/0afa8fc7bd480084#

Our Issue Tracker (Mantis) uses "pt" (point) font sizes resulting in same font size in css, e.g. 10pt look larger on monitors with higher DPI numbers.

I'm proposing either convert them to px/% fonts instead.
