

# Default module for new e-mail events

Imported From: [http://groups.google.com/group/in-portal-dev/browse\\_thread/thread/10942370cbee323a#](http://groups.google.com/group/in-portal-dev/browse_thread/thread/10942370cbee323a#)

When "Developer Kit" module (custom) is installed, then it sets itself as default module for all new labels, that are being created.  
It would be good if it can do the same for all new e-mail events as well.
